Quick setup — if you've done this kind of thing before

Set up in DesktoporHTTPSSSHhttps://github.com/DannyPuckett/software-development.git

We recommend every repository include a README, LICENSE, and .gitignore.

...or create a new repository on the command line

```
echo "# software-development" >> README.md
git init
git add README.md
git commit -m "first commit"
git remote add origin https://github.com/DannyPuckett/software-development.git
git push -u origin master
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/DannyPuckett/software-development.git
git push -u origin master
```

...or import code from another repository

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.

Import code

ProTip! Use the URL for this page when adding GitHub as a remote.
